SAP EWM Solution Architect with 11+ years leading EWM, S/4HANA, ECC, and CRM implementations — combining deep warehouse and order-to-cash (OTC) expertise with hands-on technical development in ABAP, Fiori, and RAP. I've delivered solutions across mining, railway, IT services, and sourcing & services industries, and currently architect large-scale warehouse automation and integration modernization at Solar Group. Strong communicator and consultant, with leadership experience across cross-functional teams.

WORK EXPERIENCE

Solution Architect — EWM — Solar Group

Jul 2023 – Present

Vejen, Denmark · Sourcing and services company

- **Current focus:** architecting new customer delivery experience improvements and modernizing the integration landscape (migrating from SAP PI/PO to Integration Suite).
- Led the implementation of a new, modern automated warehouse — future-proofing operations by consolidating two legacy sites into one facility handling 18–20K pick lines per day — bringing together Autostore for small-goods automation, Honeycomb's cassette management system for long goods, STILL's iGo Flow for AGV/AMR/VNA pallet automation and iGo Pilot for PXVs, and Kardex Shuttle for cable goods. Delivered on time with smooth day-one operations, through proactive planning and close coordination with the business.
- EWM/nShift Architect for **Fastbox 2.0**, giving customers more flexible delivery scheduling by place and time window — designed the process changes on the EWM and nShift side, including interface changes between EWM–ERP and EWM–nShift. Well received by customers.
- Delivered real-time Wave Item Clearing integration with the picking application to prioritize picking and replenishment — raising throughput with fewer man-hours.
- Led the migration from Decentralized EWM 9.5 to Decentralized EWM on S/4HANA (RISE, Private Cloud Edition) across 5 warehouses — a first-of-its-kind migration with a tight downtime window and no established playbook to follow. Owned the technical design and worked out how to execute the cutover, authored a ~260-page configuration and change reference documenting the process, and coordinated across internal teams and vendors throughout. Went live on time with zero data loss, smooth operations from day one, and hypercare significantly shorter than expected.
- Delivered warehouse automation upgrades — replacing manual sorting with automatic sorting in the dispatch area, and introducing robotic-arm picking from the Autostore terminal — cutting manual scan time, saving man hours, and raising throughput.
- Owned the EWM architecture side of the ECC to S/4HANA migration — supporting the ERP team with cutover planning and problem-solving, drawing on cross-functional logistics and SD experience.
- Coordinated and supported the infrastructure move from an in-house data center to an external partner, working closely across vendors.
- Architected **SmartKit Orders**, a Solar webshop feature letting customers order pre-packed, project-specific material kits — designing the EWM fulfillment side: picking and packing materials into a single labeled kit per order.
- Led development of a Fiori **warehouse cockpit** for executive-level, one-click visibility into picking and putaway progress across six warehouses, broken down by product type (small goods, long goods, pallets, cables) — cutting a 15–20 minute manual check down to about a second.
- Delivered AGV pallet automation — integrating Anronaut's Traffic Management System with EWM to manage the AGV fleet — and Kardex cable-goods handling at an earlier site, alongside ongoing nShift (Transportation Management System) upgrades and Fiori performance work.

Specialist — Package Implementation — LTI (now LTM)

Jun 2015 – May 2023

India & Denmark · Business Services (Sourcing & Services, Consulting, Railway, Mining)

- Built the **Global Template** for Nordic warehouse operations — 10 Fiori apps automating Goods Receipt, Picking, Day Closing and Returns across 90,000+ daily lines in six warehouses, with third-party robotics (Autostore, Unicontrol, Prevas) for automated picking and putaway.
- Delivered S/4HANA solutions for an IT services client — contract processing, billing, invoice splitting/merging, and revenue, tax and GST analysis.
- Led the CRM implementation for a Railway client, from solution design through user training — the client gave the solution a 10/10 in writing. Built a centralized case-communication feature for the Vigilance department — a single thread where different departments could log updates on a case — along with simplified configurations.

- Created a tailored **Simple Order Entry Workbench** — 360° customer view (open orders, deliveries, credit history, outstanding balances), follow-up and receivables alerts, and recommendation-driven add-to-cart.
- Worked OTC techno-functional on a Mining implementation — SAP GUI applications for Material Sampling, Bank Guarantee, and Supplementary Billing, including cash-discount and rounding-off logic, plus custom SD/MM SMARTFORMS.

SKILLS

SAP Modules

SAP EWM · SAP SD · SAP TM · SAP CRM · CPQ

Technical & Development

SAP ABAP · OData · SAP Fiori & UI5 · SAP RAP · ABAP Development Tools (ADT) · SAP Business Application Studio (BAS) · VS Code

Warehouse & Logistics

Warehouse Design · Goods Movement · Inbound & Outbound Logistics · Handling Units & Packaging · Replenishment · Physical Inventory · nShift (TMS)

Order-to-Cash

Order-to-Cash (OTC) · Pricing & Billing · Returns

Cross-functional

Business Analysis · SAP ERP Integration · Leadership

CERTIFICATIONS

- SAP Certified Application Associate — SAP S/4HANA Sales 1909
- SAP Certified Application Associate — SAP S/4HANA Cloud, Sales Implementation 2021
- SAP Certified Application Associate — SAP Extended Warehouse Management 9.5
- SAP Certified Application Associate — SAP Transportation Management 9.5
- SAP Certified Development Associate — SAP Fiori Application Developer
- SAP Certified Development Specialist — ABAP for SAP HANA 2.0
